

## Response to Editor — Declaration Corrections

**Manuscript:** “Real-Time Hallucination Correction in Vision-Language Models Using Dynamic Knowledge Graph Verification”

Dear Editor,

Thank you for your guidance regarding the declaration steps. We have now corrected both items directly on the submission system:

**1. Data availability.** We set the Data Availability declaration to “Yes” and entered the same statement that appears in the manuscript, so that the two are fully consistent:

“All datasets analysed during the current study are publicly available benchmark datasets obtained from their original public repositories, and are cited in this article: POPE, CHAIR (built on the MS-COCO dataset), MMHalBench, MedHallBench, InfoSeek, and KVQA. No new datasets were generated during the current study.”

**2. Dual publication.** We have set the Dual Publication declaration to “No”, confirming that the results, data, and figures in this manuscript have not been published elsewhere and are not under consideration for publication by another publisher. The incorrect text that previously appeared in this field has been removed.

We apologise for the earlier inconsistency in these declarations. We are not yet very familiar with the submission system, and we appreciate your patience in walking us through the required steps. We will be more careful with these fields in future submissions.

Thank you for your consideration.

Sincerely,  
The Authors
