Dear Editor,

I am pleased to submit the manuscript entitled **“Certified Correction of Vision–Language Hallucinations: Gains, Preconditions, and a Sequential Failure Mode”** for consideration for publication in *Neurocomputing*.

The manuscript studies selective prediction for vision–language models (VLMs) under a distribution-free risk guarantee. Building on a recent impossibility result for predictors that may only emit or abstain a model’s own answer, we introduce Certified-Correction Risk Control (CCRC): a procedure that may instead substitute the model’s answer with one from an independent evidence channel, while certifying the error rate of everything it emits at a pre-specified level with a given confidence. We prove validity for the method, characterise its behaviour, and evaluate it across five benchmarks, two backbones, and a mitigation decoder under a single, fixed protocol. Beyond the positive results, the manuscript reports the method’s limits in comparable detail: a mixture-level budget bounding self-certified repair, a checkable precondition for when the method helps, and a sequential extension that we show does not work, together with a full diagnosis of why.

We believe the manuscript is a good fit for *Neurocomputing*’s scope at the intersection of learning-theoretic guarantees and practical neural system design: it combines formal risk-control theory with an extensive empirical evaluation on real vision–language models, under a protocol designed to be checked rather than taken on faith. All code, extracted per-item signals, and negative results are released to support independent verification.

I confirm that this manuscript is original, has not been published previously, and is not currently under consideration for publication elsewhere, in whole or in part. I have read and approved the submitted version. There are no conflicts of interest to declare.

Please address all correspondence concerning this manuscript to me at the address above.

Thank you for your consideration.

Sincerely,

Quang-Vinh Dang
